Summary

Software engineer building web and Android apps with React and Kotlin Multiplatform, currently working on RAG-based systems. Experience with APIs, auth flows, and designing systems that actually scale and stay maintainable.

Experience

BaFT Technology Pvt Ltd

Aug 2025 – Mar 2026

AI/ML Engineer (Former Frontend Developer Intern)

Bangalore, India

- Transitioned from frontend to AI/ML, working across React, KMP, and intelligent systems
- Built ML models with preprocessing, feature engineering, and spend analysis for actionable insights
- Developed a RAG-based AI chatbot using LangChain and Supabase (pgvector), enabling context-aware responses via vector search and LLM integration
- Integrated REST APIs in KMP using Ktor, leveraging coroutines for async operations and Koin for dependency injection

National Skill Development Corporation

Sept 2024 – March 2025

AI Business Analyst Intern

Bangalore, India

- Performed data preprocessing and visualization to improve BI-driven decision-making
- Built inference pipelines using Pandas, NumPy, and Scikit-learn for efficient analysis
- Collaborated cross-functionally to deliver insights, boosting operational efficiency by 25%

Publications

AI-Driven Honeybot System

IJIRIS Journal, May 2025

- Published KSTC–IISc funded paper on adaptive honeypots; improved attacker retention by ~35% vs. static honeypot setups, using ML-based behavior tuning
- Built and tested 100+ attack scenarios; increased engagement by ~30% and reduced early exits by ~25% with dynamic responses
- Paper: [View Published Paper](#)

Education

Vemana Institute of Technology

2021 – 2025

B.E. Computer Science (AI/ML)

CGPA: 8.8

Projects

AI-Driven Honeybot System

Python, Flask

- Created a Flask-based honeypot with fake vulnerable endpoints; logged attacker IPs, payloads, and session data into SQL
- Analysed attacker activity and tweaked responses based on patterns to keep sessions going longer and make interactions more realistic
